

Make Truck GPS Route Using Google Maps and MapToGPX

1. Set preferred route in Google Maps
2. Convert this map using embedded link and MapToGPX
3. Import resulting GPX file into BaseCamp
4. Convert imported track to high-density route using BaseCamp; note preferences that allow you to specify the maximum number of points to be included in a route
5. Load resulting route into truck GPS
6. Use Start/green flag to initiate route
